

Claims

abc(2) 1. "amended". Transistor comprising elements of a bipolar static induction transistor, a gate, a source and a channel – on each of (the) sides of a lightly doped substrate.

B12 2. "canceled".

3. "twice amended". Transistor accoding to claim 1 in which (comprising) on each of (the) sides of (a) said lightly doped substrate an epitaxial layer of the same type of conductivity with the impurity concentration of about 10.17 cm^{-3} , in which said elements of (a) said bipolar static induction transistor: (a) said gate, (a) said source and (a) said channel – are disposed.

4. "amended". Transistor according to claims 1 or 3 (differing) in (that) which one of (the) channels of multielement structures on each of sides of (the) said substrate is thicker than other channels, (and this) said channel is connected to a separate electrode.
